

Some new and useful features of FactSage

Klaus Hack et al.
GTT-Technologies GmbH, Germany.

ABSTRACT

A short summary of some new and useful features of FactSage will be given, among these are calculation of C_p and enthalpy for one as opposed to multi-component systems, definition of FUELS in a private compound database and their use in Equilib calculations, and a new type of phase diagram which uses an enthalpy balance as y- and composition as x-axis and is now available in the Phase Diagram module.

Examples for the new input and output are given.
